STANDARD RESUSCITATION GUIDELINES

COVID-19 CONSIDERATIONS

D

Dangers?

- **Early CPR commencement** is associated with better survival
- The risk of acquiring COVID-19 in the community is generally low, and is further lowered if the rescuer is **fully vaccinated**

R

Responsive?

S

Send for help
Call 000

A

Open Airway

B

Normal Breathing?

C

Start CPR
30 compressions : 2 breaths

Give rescue breaths (if rescuer is willing and able)

- Rescue breaths are associated with better survival in certain populations, including:
 - all children
 - an adult drowning
- Use a **bag valve mask** if available and rescuer is trained in its use

D

Attach Defibrillator (AED)
as soon as available, follow prompts

Continue CPR until responsiveness or normal breathing returns

Wash hands thoroughly and clean equipment after use
