Equity, Diversity and Inclusion

NCET recognises that actively addressing issues of equity, diversity and inclusion (EDI) is vital to ensure all individuals and communities in Australia experience good quality health care and health outcomes. We have reviewed our guideline and will continue to report on the following characteristics.

no characteristics reported no characteristics reported reporting total outcomes characteristics employment reported 0 geographical location migrant status 115 0 income 109 0 age education 108 gender disability ethnicity 40 0 social support 0 3 power employment evidence **Drugs studies for the treatment of Covid-19** geographical location social support total studies studies legend Hydroxychloroquine The 115 studies included Ivermectin come from the evidence Convalescent plasma base of recommended and Favipiravir not recommended drug Lopinavir-ritonavir therapies within the NCET 16 Colchicine guidelines. Corticosteroids Casirivimab 22 Aspirin Azithromycin

Hydroxychloroquin e +AZ

Interferon beta 1a
